

Thoracic model Ref: T-S-N-010+ with Abdominal model Ref: A-S-N-002+

Thoracic model with aortic arch, left ventricle, pulmonary veins and abdominal model with renals

T-S-N-010+ model in detail

ELASTRAT's in vitro models respect human anatomy and are designed for the development and demonstration of stents, coils and catheters. They provide a realistic environment for the simulation of endovascular procedures, pre-surgery training, studies and teaching purposes for interventionists.

Elastrat's replicas are compatible with modern imaging modalities such as digital subtraction angiography, computed tomography and magnetic resonance imaging. The in vitro model's transparency to light makes them suitable for video photographic monitoring.
